

Bringing *flexible* workers in a continuous manufacturing process.

Gig and Take were approached by a multi-billion dollar construction company to help them address their labor shortages.

Our solution right-sized the company's organizational structure by introducing a flexible labor pool to work seamlessly with their full time employees.

- ✓ Each production line is serviced by a team of 12 workers per shift
- ✓ The team consists of 9-10 Full-Time (FT) workers and 2-3 Flex workers
- ✓ Flex workers start as trainees and are tagged with senior FT workers until they show proficiency
- ✓ Flex workers are only deployed in the low / mid-skilled portion of the production line in which they are trained
- ✓ Each Flex worker is cross-trained on 3 out of the 7 operations on this line (low-skill / low-risk)

Find, attract, and retain flexible talent.

Our easy to use shift management tool is pre-configured to get you up and running in hours, not months.
